Who Was in Paris - Documentation

Project Overview

Who Was in Paris is a web-based application built using the Flask framework. This chat application serves HTML pages and provides some interactive features related to a topic about industrial sustainability. The project uses a combination of Python (Flask), HTML templates, and static assets to create a functional web interface.

Features

- Serve dynamic web pages using Flask.

- Handle web-based user input/output.

- Incorporate static assets (CSS, JavaScript) for enhanced user interaction and styling.

Technologies Used

- **Python 3.x**

- **Flask** web framework

- **HTML/CSS/JavaScript** for frontend templates

- **Jinja2** templating engine (default with Flask)

Prerequisites

Ensure the following are installed on your system:

- **Python 3.6+**

- **pip** (Python package installer)
